Reading2 Response

Through Invisible visualities: Augmented reality art and the contemporary media ecology, I learned something new about AR. As the title describes, AR is an invisible visual effect. This technology has been used for hundreds of years, and even It was an illusion decades ago, but now it is gradually becoming a real product. And this technology is generating new art forms.

From the article, I learned that AR is not only presented in visual effects. It can even produce virtual artistic effects on the senses of hearing and touch. In my opinion, AR will become a new artistic trend in the near future. It will be more convenient for people to present artistic ideas in their brains, and they can be more specifically displayed to others.
