### Trees are Vital

The idea behind this video that I will be producing is about trees which are the largest kind of plants on earth. I thought about how many trees are existent on earth and how life on earth would not be possible for humans as well as animals if trees nor flowers would not exist. Trees serve a variety of purposes for our planet. Trees are the primary source for making paper, and cardboard. They also provide us with sap which is the liquid from trees to be able to make syrup, like Maple Trees. Trees produce oxygen through the process of photosynthesis. They also reduce the amount of erosion and flooding.

Trees act like a large air filter for our planet because they absorb pollutants. The leaves filter out contaminants in the air. Flowers are small compared to trees, but they also are important to our society. They can be used for the purpose of relaxation and may set the mood depending on the kinds of flowers and color. They can create a liveliness to the environment with their colorful pedals. They can be used to produce medicine. Flowers also just bring joy and happiness to humans.

Trees are vital for our planet and people are cutting a lot of trees down for their own benefit or that is used for the communities all around. Human population is growing and also cutting trees is also increasing. There is infrastructure being constructed and houses to be able to provide for the people. Cutting down trees impacts the environment in a negative way. It seems like we are not planting enough trees to balance out the amount of trees that are cut down. In this video I will include short clips from an online source that relates to trees and also construction of buildings. I will also include short videos that I recorded here locally. I will add some video effects all throughout the video. This video may not encourage people to grow plant trees and improve our environment, but hopefully to have that thought in mind about trees are being impacted by being cut down for other purposes and we are not planting trees as much.
